The story of standard data and fatigue loads

or: "Where is information about fatigue loads?"

Outline

Methods to extract fatigue loading from standard data

Simulation results and onshore test

Offshore test case with one year of data

Conclusions and outlook

From standard data to fatigue load monitoring

AV07 | 2010 9th May | 11:30 am | idling

Phase 1/2: creating a database

measurement
campaign

statistical
analysis

data
verification

record standard data:

10 min statistical parameters:
mean,
variance,
minima,
maxima...

record overall loads:

multi-stage load
cycle distribution

single-stage
equivalent load

Phase 2/2: train and validate the neural network

input/output
subset of interest

iterative network
optimization

validation of
results

subset of
input/output
pairs

training
input

test
input

load
estimate

From simulation studies with FLEX 5 to ...

input
subset of interest

test
data

tower top acceleration
generator speed
electrical power
pitch angle

feed forward
neural network

loads on main
components

rotor torque
rotor thrust
blade bending moments

...onshore test case with 150 h of data

[Cosack 2009, $m = 10$]

...onshore test case with 150 h of data

Error of single loads < 10%, accumulated loads < 4 %

Standard deviation of estimation errors up to 13 %

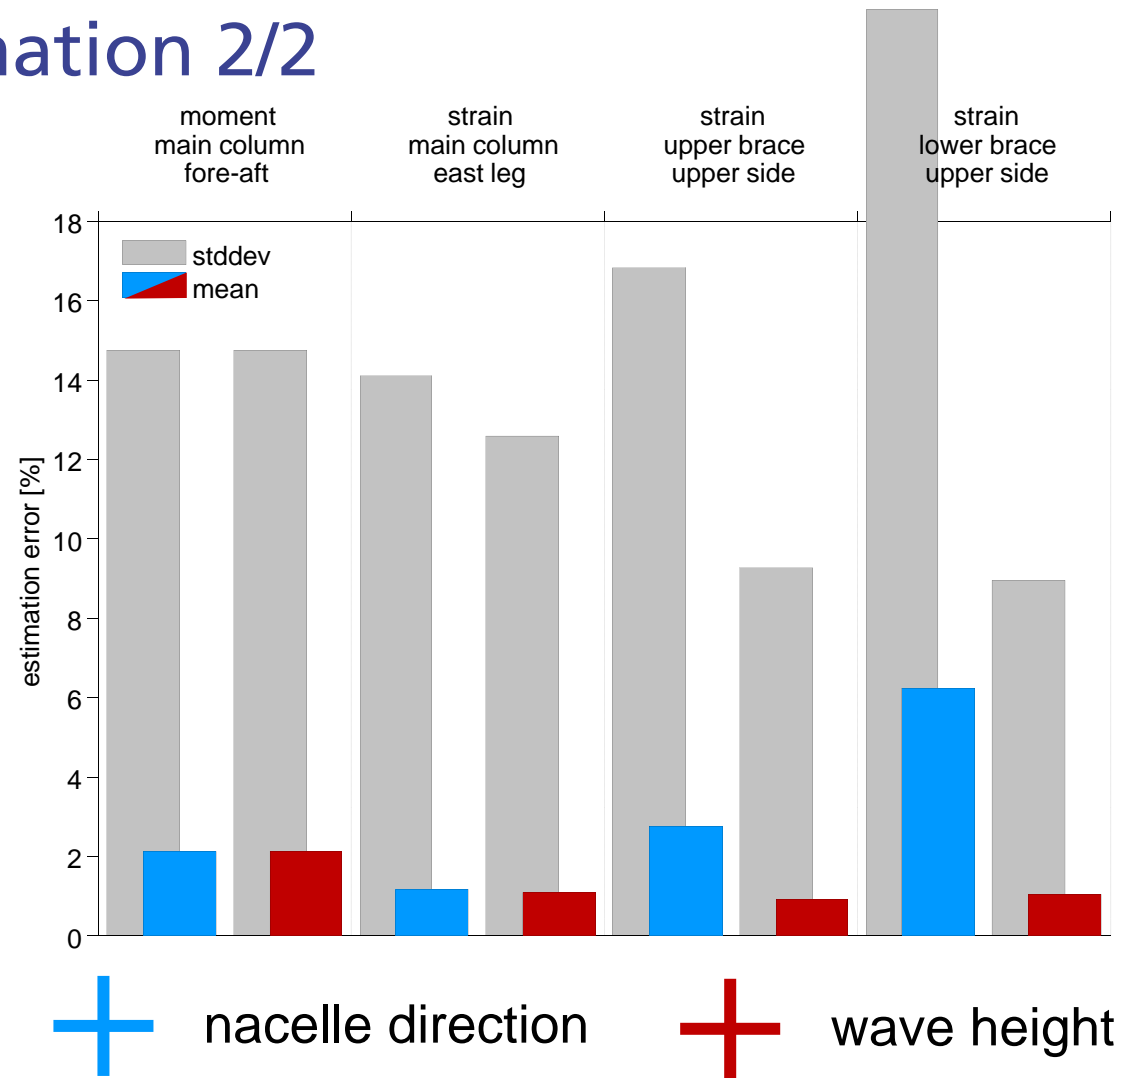

...offshore test case with 8200 h of data

Local load estimation 1/2

Local load estimation 2/2

Within the scope of the OWEA project...

- ... a load monitoring method based on statistical parameters of standard wind turbine signals has been **developed**.
- ... a **general layout** of a load estimation system has been **defined**.
- ... for onshore and offshore test cases the **feasibility** was **proven**.
- ... an **acceptable accuracy** of $<4\%$ has been achieved.
- ... even **local loads** on the support structure were **well estimated**.
- ... **sea state** measurements were shown to **enhance the accuracy**.

Outlook

- Enhance accuracy of cumulated fatigue load estimation
- Define a minimal robust set of standard signals that covers all operational and inflow conditions
- Develop methods that reduce the required duration of the initial measurement campaign

**Thanks
for your attention!**
